Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NiAlternate names: protein TIE22.130
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Accession: T4828

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that acc capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a

kinesin-like DNA binding protein (known as KID) as cytostatic, cardian immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. The polypeptide sequence is human KID protein (SeqID 8) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SLDRLLASQGSQGAPLLSTPKRERMVLMKTVEEKDLEIERLKTKQKELEAKMLAQKAEEK

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restences, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular cropilitration disorders such as cancer, hyperplasias, restences, cardiac proliferation disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders such as cancer, hyperplasias, restences, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating cellular consistences are used for associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting consistences are used for proliferation induced after medical procedures including surgery and consistence in the properties and inflammatory bowel disease and and prover protein procedures including surgery and inflammatory based and consistence approaches a human microtubule motor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 4) of the invention.

Human KNSL4 23-SEP-2004

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase for including methods of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein or act as a modulator of the binding characteristics or concer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular consistency by immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and diseases, arthritis, graft rejection, inflammatory bowel disease and angioplasty. This sequence represents a human microtubule motor procein of the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:3, but this does not Claim 1; SEQ ID NO 4; 26pp; English. appear to be the case.

ADQ09240;

The present invention describes a method for modulating the expression of a thanacos (death)-associated protein (THAP) responsive gene. The method compitation of a THAP family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing to compitating the expression of a gene responsive to a THAP responsive to complex; (2) a pharmaceutical carrier; (3) a transcription factor decoy compissing a THAP responsive element; (4) a cell method of consisting essentially of a THAP responsive element; (4) a cell compissing a transcription factor decoy described above; (5) methods of consisting a transcription factor decoy described above; (5) methods of conjugation factor decoy described above; (5) methods of conjugation of a conjugation of a conjugation of a conjugation of a conjugation of comprising a transcription factor which comprises a promoter operably linked conjugation of conjugation methods of comprising a print of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of fragment; (7) a method of constructing a cell which expresses of compound that modulates transcription construction methods for reducing the symptoms associated with a condition mediated by a THAP-family polypeptide in an individual; or a THAP-family polypeptide in an individual; or a conferior to the nucleus; (10) methods for reducing the symptoms associated with a condition associated with a condition resulting from the symptoms associated with a remarkation or a THAP-family polypeptide in an individual; or symptoms associated with a remarkation or a THAP-family polypeptide in an individual; (11) a method or confirming a test composition are proposited with a condition and confirming a mindipolate proposition are Modulating expression of a Thanatos (death)-Associated Protein (THAP) responsive gene for preventing or treating e.g. cancer or inflammation, comprises modulating the interaction of a THAP polypeptide with a nucleic thanatos-associated protein; THAP; THAP responsive gene; THAP family; THAP responsive element; angiogenesis; inflammation; metastasis; cancer; appbrosis; cardiovascular disease; neurodegenerative disease; chemokine; antiangiogenic; antiinflammatory; cardiovascular; cytostatic; encroprotective; osteopathic; THAP modulator; THAP synthesis modulator; Clouaire T; Example 47; SEQ ID NO 425; 612pp; English. cytostatic, neuroprotective and osteopathic activities, and can be used as a THAP and THAP synthesis modulator. The composition can be used for modulating the expression of a THAP responsive gene. Modulation us useful for reducing symptoms of conditions such as excessive or insufficient angiogenesis, inflammation, metastasis of a cancerous tissue, excessive or insufficient apoptosis, cardiovascular disease or neurodegenerative diseases. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                              121

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and complement of (a); (c) hybridizes under stringent conditions to (a) and complement of (b); (c) hybridizes under stringent conditions to (a) and complement of conformal and all, of an complement of the catalytic domain, a C-terminal domain, a coiled-coil structure region, a spacer region and a C-terminal domain, a coiled-coil structure region, a spacer region and a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, colleges, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or conversably cancers of the tissues or of hemacopoietic origin, diseases of the central or peripheral nervous system, Alzheimer's disease, cortain infections caused by fungi, ocular diseases, migraines, pain, bacteria, infections caused by fungi, ocular diseases, migraines, pain, coviral infections, infections caused by fungi, ocular diseases, migraines, pain, context, infections caused by fungi, ocular diseases, migraines, pain, context, infections caused by fungi, ocular diseases, migraines, pain, context, infections, infections, such and organ transplant of disorders, dyskinesias, metabolic disorders and organ transplant context, including the context of the kinase polypeptides of the criptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            153
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   301
                                                                                                                                                                                                                                                                                                                                           New isolated, enriched or purified nucleic acid molecule encoding a
kinase polypeptide, useful for treating cancer, immune-related diseases,
cardiovascular disease, brain or neuronal-associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            93

The prostate cancer antigens can have neuroprotective, cytostatic, cardioactrive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    용
                       This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 6) of the invention.
                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                              120

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening cor modulators of a motor protein which has microtubule stimulated Arpase activity, a method of testing for Arpase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein, or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune confiseration induced after rediction, inflammatory bowel disease and proliferation induced after medical procedures including surgery and proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein contents and man and man and motor protein and contents and method and method and microtubule motor protein contents and method and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using or phosphate. Furthermore readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antinfinammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 2) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            145

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening cardial encoding them. The invention also relates to a method of screening for medulators of a microtubule etimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenoisis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA conditions of the cardiac for the inflammation of the cardiac for proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenois, cardiac hypertrophy, immune disorders and inflammation, for treating disorders hypertrophy, immune disorders and inflammation, for treating disorders consociated with KID and for inhibiting KID and for treating disorders and inflammatory bowel disease and proliferation induced after medical procedures including surgery and construction protein, inflammatory bowel disease and proliferation induced after medical procedures including surgery and construction protein motor protein cof the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:1, but this does not

Claim 1; SEQ ID NO 2; 26pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

human kinase protein #33.

Novel

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                           12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               472

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and cencedes a naturally occurring kinase polypeptide; (d) encodes the concept that it lacks one or more, but not all, of an oplypeptide in (a), except that it lacks one or more, but not all, of an or N-terminal domain, c-terminal catalytic domain, a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, commune-related diseases and metabolic disorders. The disorders are neuronal-associated diseases, and metabolic disorders are for eneuronal-associated diseases, and metabolic disorders diseases, control or peripheral nervous system, Alzheimer's diseases of the central or peripheral nervous system, Alzheimer's diseases of the central infections caused by fungi, ocular diseases, migraines, pain, carceria, infections caused by fungi, ocular diseases, migraines, pain, diseases, midretion, mood disorders, attention disorders, neurological disorders, dyskinesias, metabolic disorders and organ transplant crejection. This sequence corresponds to one of the kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         70 YGERSTQODIYAGSVQPILRHLLEGQNASVLAYGPTGAGKTHTMLGS-----PEQP--GV 122

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

6 Genoscope - Centre National de Sequencage

8 BP 191 91006 EVRY cedex - France

8 Bmail: seqref@genoscope.cns.fr, Web: www.genoscope.cns.fr

8 Extrand CDNA was primed with a NotI-oligo(dT) primer. Five prime

9 enriched, double-strand CDNA was digested with Not I and cloned

into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library

was not normalized. Library was constructed by Life Technologies, a

division of Invitrogen.

This sequence belongs to sequence cluster 7766.r

For more information about this cluster, see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AL559772 Homo sapiens B CELLS (RAMOS CELL LINE) Homo sapiens CDNA CIONE CSODG005YL11 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
